Office solutions™ are a modular and fully integrated range of software applications designed to work with business telephone systems providing easy to use scalable and effective; call management, call centre management, call recording and computer telephony integration solutions. The applications use an MS SQL database, can run independently, combined, in any combination or in a comprehensive application suite controlled by licensing. Single or multi-site product licenses available. (Not for Intro)

Products will run on a single application server or PC connected to the telephone system or as a client server model with multiple clients connected to the application server.

Intro, Xpress, Pro and CTI are provided as licensed software only (no PC or Server supplied).

Office Voice Ultimate recorder is supplied as licensed software only (no PC or Server supplied).

Office Voice Compact recorder is supplied as licensed software only (no PC or Server supplied). ISDN recorders are supplied with a USB module.
